# Autoethnographic Diary

## Ethnographic Studies

**Goals**

1. Deep Understanding: Capturing the "essence" of a culture or group, not just data.
2. Authentic Insights: Exploring actual life, not just what people say.
3. Contextualization: Understanding behaviors within their social and cultural context.

**Methoden**

1. Fieldwork: Researchers enter the environment of the studied group directly.
2. Participant Observation: The researcher participates in the life of the group to experience firsthand how it operates.

## Selbststudie

As part of the target group, I am conducting a self-study to gain greater clarity regarding the needs as well as the questions for my fellow hobby filmmakers. To achieve this, I will address my own research by working through the pre-production workflow for a short film, evaluating where I find AI useful, in what form, and what value it brings to me. To make this as effective and informative as possible, I will keep a diary throughout the process and document the results.

## Tagebuch

- Short description of the work step (Time)
- Research (Time)
- Traditional tools I tried out
- AI tools I discovered/tested
- Evaluation:
    - Short description
    - What I liked
    - What I didn't like
    - How the tool could be improved
    - Exciting findings/insights
    - How I plan to continue working tomorrow
    - Entry into the workflow diagram

# Auto-Ethnographic Log: Day X

**Project:** Bachelor Thesis – Digital Media

**Researcher:** Laila Voss

**Date:** -

**Project Phase:** -

---

## I. Session Overview

**Short description of the work step (Duration- research):** (e.g., Writing scene 1, 45 min)

| Step | description | duration |
|---|---|---|
| | | |

**Research (Duration):** The time I spent looking for references, tutorials or AI Tool

| Question | Findings | duration |
|---|---|---|
| | | |
| | | |

**Traditional tools used:** A list of non-AI tools like Brainstorming, online tools etc. I used today

| Tool | comment | duration |
|---|---|---|
| | | |
| | | |

---

## II. The Creative Process

**Workflow-barrier:** The specific "barrier" I encountered today (e.g., staring at a blank page)?

| barrier | fix |
|---|---|
| | |
| | |

**Fragmentation:** Amount of different software and online tools I had to use to finish today's task?
Software:

- -

Total: -

Consequences: Did that make me lose track or leave me confused?
-

**Wish for AI:** Situations where I wished AI to take over
-

---

## III. AI Tools & Evaluation

**AI tools used:** A list of AI tools like chatbots etc. I used today

| Tool | comment | duration |
|---|---|---|
| | | |
| | | |

**AI Tool:** -
**Description:** -
**AI Autonomy:** -

| | |
|---|---|
| **Expectation** | |
| **Reality** | |
| **Likes** | |
| **Dislikes** | |
| **Communication style** | |
| **Improvement** | |

---

## IV. Authorship

**Authorship:** Did using the tool make me feel like less of a "creator"?
-

**Augmentation vs. Replacement:** Did I feel like the AI was replacing my skill or augmenting it?
-

## V. Further Insights:

-

*Entry into the workflow diagram here*

# Auto-Ethnographic Log: Day 1

**Project:** Bachelor Thesis – Digital Media

**Researcher:** Laila Voss

**Date:** 11.01.2026

**Project Phase:** Ideation

---

## I. Session Overview

**Short description of the work step (Duration- research):** (e.g., Writing scene 1, 45 min)

| Step | description | duration |
|---|---|---|
| Finding an initial idea | Starting with a blank page and coming up with an idea from nothing | 77 min |

**Research (Duration):** The time I spent looking for references, tutorials or AI Tool

| Question | Findings | duration |
|---|---|---|
| How can I get to spark an idea out of nothing? | Artlist blog that gives good inspiration for starting | 24 min |
| How can my notes tie together? | Already know about gemini | 0 min |

**Traditional tools used:** A list of non-AI tools like Brainstorming, online tools etc. I used today

| Tool | comment | duration |
|---|---|---|
| Brainwriting | Notes on what excites me in film | 21 min |
| Use random input | Get new inspiration from random, fotos, songs, artwork | 25 min |

---

## II. The Creative Process

**Workflow-barrier:** The specific "barrier" I encountered today (e.g., staring at a blank page)?

| barrier | fix |
|---|---|

| | |
|---|---|
| Blank page | Random input *NAI* |
| Non coherent notes | Gemini *AI* |
| Theme specific research | Gemini *AI* |

**Fragmentation:** Amount of different software and online tools I had to use to finish today's task?
Software:

- Youtube
- Google Docs
- Google Search
- Random Picture Generator
- Gemini

Total: 5

Consequences: Did that make me lose track or leave me confused?
No, but it was annoying to several tools

**Wish for AI:** Situations where I wished AI to take over
A lot of fragmented ideas → Ai to show me possible ways to combine them

---

## III. AI Tools & Evaluation

**AI tools used:** A list of AI tools like chatbots etc. I used today

| **Tool** | **comment** | **duration** |
|---|---|---|
| Generating ideas | Questioning gemini to give me ideas based on my notes | 20 min |
| research | Asking Gemini to give me suggestions for feminist themed greek myths | 11 min |

**AI Tool:** Gemini
**Description:** I used the AI to connect my notes into a coherent idea and research about greek myths in connection to feminism
**AI Autonomy:** 80% → only preexisting notes for vague idea

| | |
|---|---|
| **Expectation** | A concept I could further work with |
| **Reality** | One title that gave me insight on what else I find interesting(greek god) and researching on that further |

| | |
|---|---|
| **Likes** | Also functions somehow as a random input generator(unintentionally) |
| **Dislikes** | Has focusses like here the motorcycle that aren't as important to me. And the ideas didn't yet speak to me that much |
| **Communication style** | chatbot |
| **Improvement** | Something more visual and not just a plain list of ideas. Maybe more inspirational than outthought ideas |

---

## IV. Authorship

**Authorship:** Did using the tool make me feel like less of a "creator"?
No, but I refuse to take the output as anything more than inspiration otherwise I definitely would

**Augmentation vs. Replacement:** Did I feel like the AI was replacing my skill or augmenting it?
Neither

## V. Further Insights:

Having to research for ways to start is keeping me from starting. There are no AI “tools” for coming up with a new idea in the film genre. Having to research at all is quite annoying when you just want to start getting creative

I would never use/just copy an idea AI gives me even if it is based on my prompt. It just feels like against the point of a creative project.

*Entry into the workflow diagram here*

# Auto-Ethnographic Log: Day 2

**Project:** Bachelor Thesis – Digital Media

**Researcher:** Laila Voss

**Date:** 12.01.2026

**Project Phase:** Moodboard

---

## I. Session Overview

**Short description of the work step (Duration- research):** (e.g., Writing scene 1, 45 min)

| Step | description | duration |
|---|---|---|
| Creating a first moodboard | Because I already have a vision of the look and feel of the film I created a moodboard with picture that match the image in my head | 54 min |

**Research (Duration):** The time I spent looking for references, tutorials or AI Tool

| Question | Findings | duration |
|---|---|---|
| What AI-Moodboard Tools are there I can try? | Adobe firefly boards lets you create even more content. | 15 min |
| Where can I generate a color palette from my image? | Adobe has its own but there are other online tools like gradients.app | 5 min |

**Traditional tools used:** A list of non-AI tools like Brainstorming, online tools etc. I used today

| Tool | comment | duration |
|---|---|---|
| Miro | I used Miro as a canvas to dump the pictures I found into | 15 min |
| Pinterest | Searching for pictures to match the vibe of my film | 19 min |

---

## II. The Creative Process

**Workflow-barrier:** The specific "barrier" I encountered today (e.g., staring at a blank page)?

| barrier | fix |
|---|---|
| none | - |

**Fragmentation:** Amount of different software and online tools I had to use to finish today's task?
Software:

- Miro
- Pinterest
- Gradients.app
- Firefly boards

Total: 5

Consequences: Did that make me lose track or leave me confused?
Each software also has their own subscription model which is really annoying if you have so many tools to use but also pay

**Wish for AI:** Situations where I wished AI to take over
Creating a moodboard didnt call for any use of AI. I was only curious what other options there are.

---

## III. AI Tools & Evaluation

**AI tools used:** A list of AI tools like chatbots etc. I used today

| Tool | comment | duration |
|---|---|---|
| Miro AI | It what suggested and just tried it to see what it can do | 5 min |
| Firefly boards | I wanted to see what AI options could offer | 15 min |

**AI Tool:** Miro AI
**Description:** Miro has added AI in many different forms
**AI Autonomy:** 95% The only requirement was for it to create a moodboard for a shortfilm

| | |
|---|---|
| **Expectation** | It creating a template for a moodboard |
| **Reality** | Generated 6 images |

| | |
|---|---|
| **Likes** | Easy to use in the Miro environment |
| **Dislikes** | From Miro I wanted it to give me a framework. The random AI generated images are not necessary. |
| **Communication style** | chatbot |
| **Improvement** | An explanation for what the tool does. More assisting what Miros job is(giving a canvas to work on) instead the typical AI generate stuff |

**AI Tool:** Adobe Firefly Boards
**Description:** A infinite canvas to drop images and notes on to create moodboards
**AI Autonomy:** 50% I gave it my preexisting moodboard and looked what it would do with it

| | |
|---|---|
| **Expectation** | none |
| **Reality** | Possibility to create more AI content(images and videos) from your existing content |
| **Likes** | In theory a cool way to see how e.g. your static compositions could look together(mix ästhetic moodboard with style moodboard) or as a video. Directly on the board |
| **Dislikes** | While the video feature works really well the combining and variety tools weren't really satisfying. The combining didn't really match either of the input. The variety didn't really give any new insight |
| **Communication style** | Chatbot + other input |
| **Improvement** | The functions do make sense but dont work as to that they are useful yet. Some more not AI generated suggestion for images to add to the board would have been cool |

---

## IV. Authorship

**Authorship:** Did using the tool make me feel like less of a "creator"?
The functions I tried out did feel a bit automated. I used my own moodboard and wanted to see what i could get out of it. Thats why it didnt feel like i wasnt the creator

**Augmentation vs. Replacement:** Did I feel like the AI was replacing my skill or augmenting it?
Neither. It didnt really work with me and I did all the work. I didnt feel like it could do the work for me. Especially since going the traditional way was so much easier.

## V. Further Insights:

I was greeted on Miro with new AI tech that lets me generate things(here e.g. when u type moodboard then 6 images for a moodboard)
It is also now possible to create workflows in Miro I will try this at the end
Everything costs money
Artlist artboard to is hard to use because of the menu on the side and no connections

*Entry into the workflow diagram here*

# Auto-Ethnographic Log: Day 3

**Project:** Bachelor Thesis – Digital Media

**Researcher:** Laila Voss

**Date:** 13.01.2026

**Project Phase:** Ideation

---

## I. Session Overview

**Short description of the work step (Duration- research):** (e.g., Writing scene 1, 45 min)

| Step | description | duration |
|---|---|---|
| Research | Search for information to gather more insight on my idea | 90 min |

**Research (Duration):** The time I spent looking for references, tutorials or AI Tool

| Question | Findings | duration |
|---|---|---|
| | | |

**Traditional tools used:** A list of non-AI tools like Brainstorming, online tools etc. I used today

| Tool | comment | duration |
|---|---|---|
| Instagram | While scrolling through instagram in my free time I encountered interesting input for the topics I could cover | freetime |
| Google Search | Scrolling through different pages to find out more about greek myths and feminism. Later researching about Lilith | 45 |
| Listening to music | To stimulate creativity with lyrics, rhythms and titles | continuously |

---

## II. The Creative Process

**Workflow-barrier:** The specific "barrier" I encountered today (e.g., staring at a blank page)?

| barrier | fix |
|---|---|

| | |
|---|---|
| Lack of information | *research* |
| Too much information | *Perplexity* |

**Fragmentation:** Amount of different software and online tools I had to use to finish today's task?
Software:

- Gemini
- Google search
- Google docs
- Perplexity

Total: 4

Consequences: Did that make me lose track or leave me confused?
Switching between tabs to take notes

**Wish for AI:** Situations where I wished AI to take over
A lot different but also redundant information. Loosing oversight. AI gives a good breakdown

---

## III. AI Tools & Evaluation

**AI tools used:** A list of AI tools like chatbots etc. I used today

| **Tool** | **comment** | **duration** |
|---|---|---|
| Gemini | Continued the research from day 1 | 25 |
| Perplexity | Get an overview about a topic | 20 |

**AI Tool:** Perplexity
**Description:** “AI-answer engine” that researches and gives citations
**AI Autonomy:** 50% I gave in my question but no restrictions for the search

| | |
|---|---|
| **Expectation** | Give me a text that helps me organize the information I read on google |
| **Reality** | What I expected with addition of some critical views and history |
| **Likes** | The addition gave me more ideas of what I want to do and also found what I was looking for which I couldnt find googling |
| **Dislikes** | |
| **Communication style** | Chatbot |

| | |
|---|---|
| **Improvement** | none |

---

## IV. Authorship

**Authorship:** Did using the tool make me feel like less of a "creator"?
A little bit. Even though the ideas are mine when they are sparked by the ai it feels a bit weird

**Augmentation vs. Replacement:** Did I feel like the AI was replacing my skill or augmenting it?
augmenting

## V. Further Insights:

-

*Entry into the workflow diagram here*

# Auto-Ethnographic Log: Day 4

**Project:** Bachelor Thesis – Digital Media

**Researcher:** Laila Voss

**Date:** 17.01.2026

**Project Phase:** Script/Visualisierung

---

## I. Session Overview

**Short description of the work step (Duration- research):** (e.g., Writing scene 1, 45 min)

| Step | description | duration |
|---|---|---|
| Script | A first draft for the storyline | 25 min |
| Visualisierung | Sketches from the scenes in my head | 125 min |

**Research (Duration):** The time I spent looking for references, tutorials or AI Tool

| Question | Findings | duration |
|---|---|---|
| | | |

**Traditional tools used:** A list of non-AI tools like Brainstorming, online tools etc. I used today

| Tool | comment | duration |
|---|---|---|
| Bulletpoints | List of events in chronological order | 25 min |
| Procreate | Drawing application for ipad for drawing scenes | 125 min |

---

## II. The Creative Process

**Workflow-barrier:** The specific "barrier" I encountered today (e.g., staring at a blank page)?

| barrier | fix |
|---|---|
| Bringing images in my head on paper | *Sketching in procreate* |

**Fragmentation:** Amount of different software and online tools I had to use to finish today's task?
Software:

- Google docs
- Procreate
- Google Drive
- Datei-Explorer

Total: 4

Consequences: Did that make me lose track or leave me confused?
No, but either sketching directly in my docs or easy data transfer would be cool

**Wish for AI:** Situations where I wished AI to take over
Making highfidality/realistic pictures of what I imagine, because drawing in that detail would take ages.

---

## III. AI Tools & Evaluation

**AI tools used:** A list of AI tools like chatbots etc. I used today

| Tool | comment | duration |
|---|---|---|
| | | |

**AI Tool:** -
**Description:** -
**AI Autonomy:** -

| | |
|---|---|
| **Expectation** | |
| **Reality** | |
| **Likes** | |
| **Dislikes** | |
| **Communication style** | |
| **Improvement** | |

---

## IV. Authorship

**Authorship:** Did using the tool make me feel like less of a "creator"?
-

**Augmentation vs. Replacement:** Did I feel like the AI was replacing my skill or augmenting it?
-

## V. Further Insights:

-

*Entry into the workflow diagram here*

# Auto-Ethnographic Log: Day 5/6

**Project:** Bachelor Thesis – Digital Media

**Researcher:** Laila Voss

**Date:** 18.01.2026

**Project Phase:** Character moodboard and design

---

## I. Session Overview

**Short description of the work step (Duration- research):** (e.g., Writing scene 1, 45 min)

| Step | description | duration |
|---|---|---|
| Character moodboard | Adding moodboards for each character<br>*same process as day 2 | 120 |
| Character design | Developing on how the characters should look | 240 min |

**Research (Duration):** The time I spent looking for references, tutorials or AI Tool

| Question | Findings | duration |
|---|---|---|
| Is there a program for pose references | A couple of programs for 3d models → Clip studio | 20 min |
| How to use clipart studio | In app tutorial and practice | 45 |

**Traditional tools used:** A list of non-AI tools like Brainstorming, online tools etc. I used today

| Tool | comment | duration |
|---|---|---|
| Clip studio | lets you edit models gender, figure and pose | 20 min |
| Procreate | For drawing the character over the body reference | 160 min |
| Photoshop | Editing color and removing background from ai images | 20 min |

---

## II. The Creative Process

**Workflow-barrier:** The specific "barrier" I encountered today (e.g., staring at a blank page)?

| barrier | fix |
|---|---|
| Transferring my imagination to visualisation in great detail/ time | *Gemini/Nano Banana* |

**Fragmentation:** Amount of different software and online tools I had to use to finish today's task?
Software:

- (Pinterest)
- Miro
- Clip studio
- Procreate
- Gemini
- Photoshop
- Google docs

Total: 6 (+1)

Consequences: Did that make me lose track or leave me confused?
Yes. But for some it was advantage and disadventage because i needed two screens

**Wish for AI:** Situations where I wished AI to take over
Get fast results for my characters

---

## III. AI Tools & Evaluation

**AI tools used:** A list of AI tools like chatbots etc. I used today

| Tool | comment | duration |
|---|---|---|
| Gemini | Refining my drawings | 40 min |

**AI Tool:** Gemini/Nano Banana
**Description:** Chatbot to generate images
**AI Autonomy:** 30% I gave the AI my sketch with some notes its purpose was to add shading

| | |
|---|---|
| **Expectation** | Getting details high resolution images that correspond with the ones in my head with the help of my sketches |

| | |
|---|---|
| **Reality** | With a few tries and a couple unasked changes i am very satisfied with the result |
| **Likes** | Fast way to come from imagination to rough sketch to nearly real looking characters |
| **Dislikes** | Some changes that weren't in the description |
| **Communication style** | chatbot |
| **Improvement** | Stay closer to the instructions |

---

## IV. Authorship

**Authorship:** Did using the tool make me feel like less of a "creator"?
In private use now it made me feel like co creation. If I showed the results to someone else I would feel like my input would be underestimated and others would see me as the co-author I am.

**Augmentation vs. Replacement:** Did I feel like the AI was replacing my skill or augmenting it?
Augmentation but could be a little more interaction and the power i had felt a little limited

## V. Further Insights:

Because of the bad stigma ai art has i would feel bad if i showed it to other people and as if i had to justify myself. But in my private use it was a lot of fun especially because it is a fast way to bring imagination to paper-

*Entry into the workflow diagram here*

# Auto-Ethnographic Log: Day 7

**Project:** Bachelor Thesis – Digital Media

**Researcher:** Laila Voss

**Date:** 22.01.2026

**Project Phase:** Character Sheet and Storyboard

---

## I. Session Overview

**Short description of the work step (Duration- research):** (e.g., Writing scene 1, 45 min)

| Step | description | duration |
|---|---|---|
| Character Sheet | Shows different angles and poses as a reference for the storyboard | 50 min |
| Reference frame | Create a frame that sets the vibe and can be referenced for a consistent aesthetic | 80 min |
| Storyboard | Turn script into visual scenes(first scene) | 70 min |

**Research (Duration):** The time I spent looking for references, tutorials or AI Tool

| Question | Findings | duration |
|---|---|---|
| How to good storyboard with AI | Create gem and have reference frame | 30 min |

**Traditional tools used:** A list of non-AI tools like Brainstorming, online tools etc. I used today

| Tool | comment | duration |
|---|---|---|
| Photoshop | Make the character sheets uniform | 20 min |

---

## II. The Creative Process

**Workflow-barrier:** The specific "barrier" I encountered today (e.g., staring at a blank page)?

| barrier | fix |
|---|---|

| | |
|---|---|
| Turning my sketches into more understandable visuals | *Use gemini image generation* |
| Have uniform character sheets | *Photoshop* |

**Fragmentation:** Amount of different software and online tools I had to use to finish today's task?
Software:

- Gemini
- Miro
- Photoshop

Total: 3

Consequences: Did that make me lose track or leave me confused?
no

**Wish for AI:** Situations where I wished AI to take over
For fast turning sketches into how the images look in my head without having to draw detailed pictures for hours

---

## III. AI Tools & Evaluation

**AI tools used:** A list of AI tools like chatbots etc. I used today

| **Tool** | **comment** | **duration** |
|---|---|---|
| Gemini | Like with characters I used it to turn my sketches to something more detailed | 180 min |

**AI Tool:** Gemini
**Description:** Character Sheet
**AI Autonomy:** 10% gave it the done character and just let it add different perspectives an poses

| | |
|---|---|
| **Expectation** | Clean character sheet just showing the character from every angle |
| **Reality** | Kept the background from the character image. Adjusted the style of the sheet to the character vibe. Added poses. |
| **Likes** | Angles and poses were what I needed |
| **Dislikes** | Not a neutral clean character sheet. Managed to fix this for the first |

| | |
|---|---|
| | character but not for the others and did weird things that weren't asked for like changing the character completely. |
| **Communication style** | Chatbot |
| **Improvement** | Only adjust what it asked in the prompt. Better inclusion of other images. |

---

**AI Tool:** Gemini
**Description:** Image that shows the aesthetic for the movie
**AI Autonomy:** 30% gave it the characters, description of the scene and a reference for the aesthetic/lighting

| | |
|---|---|
| **Expectation** | Adds the asthetic from my moodboard to the scene |
| **Reality** | Added the colors of the light but not the allover vibe |
| **Likes** | Scene like I imagined |
| **Dislikes** | Aesthetic not at all accurate. Still very AI and not individual more like all AI images. Not receptive to critique. Quality and faces got distorted with every iteration |
| **Communication style** | chatbot |
| **Improvement** | Better in changing small things and keeping the rest as is |

---

**AI Tool:** Gemini
**Description:** Making Storyboard with custom gem
**AI Autonomy:** I created a gem with all my materials that I created in the previous steps and assigned a specific role and guidelines

| | |
|---|---|
| **Expectation** | Turning sketches into realistic looking scenes with my desired aesthetic |
| **Reality** | The scene again is good but lighting not as I want it |
| **Likes** | Scene setup |
| **Dislikes** | Not receptive to changes to the look and feel |
| **Communication style** | chatbot |
| **Improvement** | changes |

## IV. Authorship

**Authorship:** Did using the tool make me feel like less of a "creator"?
A little bit because it felt like I was tied to what the AI would do and its capacity. So sometimes I would give up after too many iterations with no desired result.

**Augmentation vs. Replacement:** Did I feel like the AI was replacing my skill or augmenting it?
Neither. It didnt manage to be as helpful as I wished

## V. Further Insights:

A big problem is that the AI is very bound to one aesthetic and not really flexible to create more unique lighting, contrast and colors

*Entry into the workflow diagram here*

# Auto-Ethnographic Log: Day 8

**Project:** Bachelor Thesis – Digital Media

**Researcher:** Laila Voss

**Date:** 28.01. 2026

**Project Phase:** Storyboard

---

## I. Session Overview

**Short description of the work step (Duration- research):** (e.g., Writing scene 1, 45 min)

| Step | description | duration |
|---|---|---|
| storyboard | Creating visuals for every frame | 405 min |

**Research (Duration):** The time I spent looking for references, tutorials or AI Tool

| Question | Findings | duration |
|---|---|---|
| | | |
| | | |

**Traditional tools used:** A list of non-AI tools like Brainstorming, online tools etc. I used today

| Tool | comment | duration |
|---|---|---|
| Storybinder | Download template for storyboards | 5 min |
| Photoshop | Edit Template and insert images | 25 min |
| Feedback | Talking to a friend to get another opinion | 25 min |

---

## II. The Creative Process

**Workflow-barrier:** The specific "barrier" I encountered today (e.g., staring at a blank page)?

| barrier | fix |
|---|---|
| | |

| | |
|---|---|

**Fragmentation:** Amount of different software and online tools I had to use to finish today's task?
Software:

- Storybinder
- Photoshop
- Gemini
- Firefly

Total: 4

Consequences: Did that make me lose track or leave me confused?
It would be cool to add image immediately because of many iterations of image generation one loses track of best result

**Wish for AI:** Situations where I wished AI to take over

---

## III. AI Tools & Evaluation

**AI tools used:** A list of AI tools like chatbots etc. I used today

| **Tool** | **comment** | **duration** |
|---|---|---|
| Gemini | Create Storyboard images | 30 min |
| Firefly Boards | Create Storyboard images | 10 min |
| Firefly | Create Storyboard images | 310 min |

**AI Tool:** Gemini
**Description:** Frame for frame storyboard generation
**AI Autonomy:** 30% I gave the AI a reference image and description for how the scene should look, the character sheets and style reference

| | |
|---|---|
| **Expectation** | Put characters into the described scene and add lighting like in the reference |
| **Reality** | wrong perspective, pose, characters and lighting and only hard editing for lighting it didnt work at all |
| **Likes** | Possibility of chat response → could ask you on specifications |

| | |
|---|---|
| **Dislikes** | Very tedious to change anything and always having to rereference and sometimes complete random output |
| **Communication style** | chatbot |
| **Improvement** | Interface that includes references and easier small changes |

---

**AI Tool:** Firefly Boards
**Description:** Frame for frame storyboard generation(test)
**AI Autonomy:** 50% no character references but reference image and description for how the scene should look and style reference

| | |
|---|---|
| **Expectation** | Some version of my description |
| **Reality** | Very far from description |
| **Likes** | consideration of the composition reference and style reference |
| **Dislikes** | Looked very weird and no consideration of my description. Could only add one style image and one composition image. Chaotic board interface |
| **Communication style** | Only input and image output |
| **Improvement** | Clearer interface with more possibilities of input |

---

**AI Tool:** Firefly
**Description:** Frame for frame storyboard generation
**AI Autonomy:** 30% I gave the AI a reference image and description for how the scene should look, the character sheets and style reference

| | |
|---|---|
| **Expectation** | Put characters into the described scene and add lighting like in the reference |
| **Reality** | too close to the sketch(characters like I drew them)in storyboard not charactersheet |
| **Likes** | Possibility to make something like you sketched it, good scene and lighting. Directly further work on previously generated image(use as reference) Easy integration of 6 reference images |
| **Dislikes** | Characters were like sketch and didnt add my description into consideration. Sometimes really hard to only change one small detail |

| | |
|---|---|
| **Communication style** | Only input and image output |
| **Improvement** | Better further iteration, more accurate to users wishes |

---

## IV. Authorship

**Authorship:** Did using the tool make me feel like less of a "creator"?
No, it felt like a good balance just the communication was annoying since it rarely did as i wished/asked

**Augmentation vs. Replacement:** Did I feel like the AI was replacing my skill or augmenting it?
If it worked a bit better it would definitely be augmentation. But since it does its own thing very often it doesnt feel like cooperation

## V. Further Insights:

All three AI options used Nano Bana but the way of communication made the experience very different.
An overview sheet that has everything in one view would be great so you have a clear understanding of your vision and it's also great for sharing with others.

*Entry into the workflow diagram here*

# Summary

## Ideation

- Randomness Helps give new input
  → could be cool to have different kinds of output not only text
- Things it lies focus on don't align with my priorities
- Wish for Tool that integrates different methods of ideation
- Stimuli like music and social media can give ideas → space to note them
- I often get ideas from researching a topic in a field that interests me

→ Ideation tool with a useful interface with different brainstorming methods and AI features

## Moodboard

- Boards combined with AI feel a bit hard to use because im used to chatbots
- Board in general practical for gathering mood, a pinterest plugin would be cool
- The possibility of generating, mixing and generating variants directly with the images on the board is helpful
- AI results still far from what I hoped because it doesn't combine them like I want it to

## Script

- More of a sequence description and image in my head → a framework for that like studiobinder AV-Script without the audio and with more guidelines with what are necessary information → brings more of what's in your head on paper
- Direct rough visuals in this step already for me easier than describing in detail → integrate drawing functionality
- For describers it would be cool if their description was an automatic prompt and while they edit their description the generated image changes

AV-Script with automatic image generation

## Characters

- 3D models as body, pose and perspective reference very useful
- AI great to give your sketch life and come closer to the vision

→ A tool that takes your sketch → makes it a good looking character → creates character sheet → u can pose skeleton and it generates your character in that pose
(good example for a bad version of this is dziner)

## Storyboard

- Wish to create a storyboard of described scene accurate to character, style and aesthetic reference

- Takes a really long time to make them all individually and is redundant to add in character and references again and again
- Inaccurate results
- Problems translating my vision
- How do I put what I imagine into words?

## Tool idea

- Note Storyline with guideline(scene, daytime, characters, action)
- Establish aesthetic
- Define characters(looks and character)
  → Storyboard template with description filled out from storyline, user can edit to their liking
  → User hast to add in the camera setting
  → storyboard images are generated automatically
  Wie teste ich das aber? Weil probanden müssten sich sehr viel zeit nehmen
