Procedure

Preparation

Evening before:

- Print
- Fill in ProbID and date

→ Privacy Consent Form, Tasks, Interview Protocol

Morning of:

1. **XAMPP** starten
2. **ComfyUI** portable starten
3. **Admin seite** starten → **warmup**
4. Connect **Camera**
5. Start **webcam app**
6. Go to **VDO.Ninja** → start → mute → Copy URL
7. Open **parsec**
8. Start **OBS** → click Quelle(Browser) → Eigenschaften → insert URL
9. Open welcome

(Storyboard page)

Setup

- Cheat sheet an die wand
- Props bereit legen
- Snacks vorbereiten
- Application prepared
- Timer bereit
- Handy für audio aufnahme bereit
- Privacy Consent Form hinlegen
- Task(probID) bereit
- Interview(probID) bereit

Introduction

Thank you for coming to participate in my study. In my study I want to evaluate the real world interaction with a mannequin to create shots that are turned into Storyboard frames by generative AI. The focus of my research lies on the combination of the tangible puppet and the ai processing. The integration of choosing a character and background are kept rudimentary for the purpose of this study.
It will be your task to create a short movie with three scenes using the "Spielboard"-application.

1. Following a couple of formalities, you will be given an **introductory task** to get familiar with the application. Feel free to ask any questions you might have.

2. For the **first task** you will be given the first scene of a movie script. The script is already subdivided into frames and each frame contains instructions for the camera settings. It is your task to turn this script into a storyboard using the "Spielboard"-application

3. The **second task**, similarly to the first, contains the second scene of the movie script. With the difference, that you can divide it into frames of your liking and think of camera settings yourself.

4. After the first two tasks you will participate in a short **interview** with me

5. And lastly you won't be given any instructions at all for the **third task** except to create the third scene of the movie. You are free to be creative with all props on the table next to you.

6. In conclusion of the study I will be conducting one **final interview** and ask you to answer the **questionnaire**.

But don't worry if you can't remember all of this, you will be guided through each step by the application.
If you would like to proceed, please sign the consent form. I will be recording the interviews later pseudonymize and transcribe them for evaluation

[hand out Privacy Consent Form]
You may now continue on the laptop. Don't hesitate if you have any questions.

Welcome.html → start.html → demoqu.html
Popup

I will now give you the introductory task.
There are some tips on the bottom of the page:

Tip:

- Try to have the face in the picture. If the AI generates a completely different pose it is probably because it couldn't recognise a face
- You can press the space bar or the button in the app to shoot a picture
- Use short descriptive words for the background e.g.: *dense jungle foliage, tropical leaves*
  Avoid mentioning the character in this prompt e.g.: ~~*Dave is… or the character is …*~~
- It takes up to 10s to generate an image

[hand out Introduction]
You have 5 minutes to complete this task
[start timer: 5 min]

Start.html → index.html → storyboard.html
Popup

[hand out Task 1]
[start timer: 8 min]
index.html → storyboard.html
Popup

[hand out Task 2]
[start timer: 10 min]
storyboard.html
Popup

[start audio]
I now have a couple of questions for you
[go through Interview 1]

[hand out Task 3]
[show props]
Feel free to engage with these props like you feel like
[start timer: 12 min]
storyboard.html
Popup

Perfect, then you are done with creating your own storyboard you can continue to the overview of your work now.

Overview.html
(Popup)

[start audio]
I now just have some questions left for you.
[go through Interview 2]

Questionnaire.html → thanks.html

[end session]
[offer snacks]
