D1p1

2
00:00:04,019 --> 00:00:11,700
[Interviewer]: Alright, now my first question is, how did you proceed with the first task? So how did you approach it?

3
00:00:13,360 --> 00:02:31,320
[Participant]: Okay, so first task, I think already you gave the composition with how it needs to be framed. So that was there. So first thing you have to set up the mannequin. So that was the tricky part for me, setting that up. But also the image reference was also given, I think. No, no, I had to write that in. Yeah, but then I thought, okay, I want to have a side profile shot of him running and then in the background, I imagined to be the New York streets. That was what first came into my mind. When you said that. So I first imagined, okay, this is the background I want and this kind of shot. It's like in the side view and there are some cars in the foreground and in the background there are the buildings. So that's how I imagined it. And to get that shot, I think the running pose, I got that. And then the prompting was straightforward, what I had in my mind. And the second shot became much more clear. Because now it gives reference to how the hands is placed with respect to the camera. So it may be much more easier to frame the shot. You see the left down is towards the camera. So now you know it can be shot like that. And yeah, and for the background, it's just the same consistence because if the medium shot, the background would be slightly blurred out on it. I dont really need some detailing from that. Yeah. But the overall process, I kind of like it. Like how this process of you can composite the shot in real time and then with real props and then you just work on the background, which is the extra stuff. But it seems really like a cool idea when you want to get the full idea of how you want to composite or, you know, try out the scene and various different angles and frames and stuff. Yeah. So I found that really interesting to play around with. If I had more time, I could have done that.

4
00:02:31,380 --> 00:02:34,980
[Interviewer]: Yeah, you can do that in the third task.

5
00:02:35,120 --> 00:02:35,320
[Participant]: Okay.

6
00:02:36,940 --> 00:02:42,420
[Interviewer]: Again, did you approach the second task the same way or differently? Or how did you approach it?

7
00:02:43,960 --> 00:03:06,300
[Participant]: Yeah, the second task, I think it is mostly just describes the scene and then you have to do the shot division and how you want to execute that shot. So I thought, okay, we'll just start with some close up. Because this is kind of, in my mind, it's kind of a metric shot to slow motion. And this is how I first it came to my mind. So I tried to break it down.

8
00:03:06,760 --> 00:03:09,740
[Interviewer]: So you started with the composition.

9
00:03:10,000 --> 00:04:51,980
[Participant]: Yeah, in my mind, how I want to composite it. So I thought, yeah, it would be some slow motion shot in which the character freezes in time and makes that leap and then comes down. So that's why I break it down into his feet going up. Going from the ground and then the still movement in which he's in the stop. So it's a wide shot and I want the background to be kind of symmetrical, like some leading lines and some buildings in the background. So it kind of shows that he's the center. Yeah, and working with this. It's a bit tricky, I'd say. because, you know, the current part is that the limbs movement you work with it, I feel it's a bit tricky to get it right. But if you can play around it, you can. I mean, it's very difficult to get the right pose from fine tuning the mannequin. It's much more easier when you can, you know, because the actions which you are doing, it's very unpredictable. You can't, you can't correctly fine tune that. But the framing and stuff, which is very helpful, like if you have a subject there. And then you can use this to kind of frame it, you can have much more flexibility. Okay, I would like this, but my subject would be there and my background amd stuff. That thing, I really find it very, very interesting. Yeah, but overall, I tried to divide it into much shots and show that action in multiple shots to kind of visualize it. Yeah.

10
00:04:54,200 --> 00:05:03,060
[Interviewer]: Okay, you already said a little bit about this. But like,on a scale from one to seven, how did you like the physical posing features? Like you said, it was a little tricky?

11
00:05:04,940 --> 00:05:51,100
[Participant]: Yeah, as I said that, you know, the fine. tuning and getting the right posture or that stuff, it's a bit tricky, but you cant kind of simulate how a real person puts them. There are a lot of joints and a lot of stuff. So yeah, it's really tough to manage all. But the idea that okay, you have a subject and you can put it in certain places and, you know, frame it and see the camera. You can work really with the camera to because in movies, if you shoot, it's like, okay, you have a medium of a character or an over the shoulder of a character or a close up of the eyes and how. You just need references for storyboards. In that case, it's really, really helpful.

12
00:05:51,140 --> 00:05:54,160
[Interviewer]: And so on a scale from one to seven.

13
00:05:55,160 --> 00:05:58,940
[Participant]: I would say it's an eight. No, no, no. Okay, one to seven.

14
00:05:58,980 --> 00:06:01,360
[Interviewer]: Yeah, one is negative. Seven is positive.

15
00:06:01,400 --> 00:06:02,100
[Participant]: Five.

16
00:06:02,140 --> 00:06:14,580
[Interviewer]: Okay. Yeah, that's very helpful. Definitely what you're saying. So were there moments where the mannequin itself changed an original idea that you had?

17
00:06:18,220 --> 00:06:26,080
[Participant]: I mean, I have to go with what I could make with the mannequin. Yeah. As I said, it's tough to get it the exact.

18
00:06:26,620 --> 00:06:28,540
[Interviewer]: So a little bit constricted, you would say?

19
00:06:29,140 --> 00:06:40,380
[Participant]: Yeah, I constricted and tricky to get the mannequin right. I would not spend much time on the mannequin to get the right posture or stuff.

20
00:06:41,440 --> 00:06:46,300
[Interviewer]: Okay. And just a couple more questions.

21
00:06:46,340 --> 00:06:48,640
[Participant]: No problem. I'm really interested.

22

00:06:50,980 --> 00:06:56,860
[Interviewer]: On a scale from one to seven, how much did you feel in control of the result?

23
00:06:56,900 --> 00:08:07,420
[Participant]: I feel with the framing and the composition, it was giving me exactly the kind of shots composition which I want, like when I wanted a wide full shot or closer, it was giving that. And also based on how the background elements are composited, like I wanted leading lines and it sort of got that area, leading lines on the buildings in the side. In a rough way, it is getting what I want. Yeah, but prompting is always limited to really express. what is, what really you want to, you imagine to like naturally work. So it's always constrained. But with the minimal ideas which I gave, like whatever I had in my mind, it was able to get a very basic idea of what I really wanted to imagine. But in that way, I find it was.

24
00:08:11,880 --> 00:08:16,520
[Interviewer]: Yeah, one to seven. Like, did you feel in control of the, how much did you feel in control of the result?

25
00:08:16,580 --> 00:08:20,580
[Participant]: I would say it's six.

26
00:08:20,900 --> 00:08:28,540
[Interviewer]: Okay, Did the mannequin influence that rating? or how did it influence that rating, you would say?

27
00:08:29,380 --> 00:08:55,800
[Participant]: Yeah, mannequin was the only tricky part. But the other things like I can do the shot composition and also the background, how I wanted it was all done perfect. The mannequin get the pose right was the only like part which I found it very tricky. The other parts which was okay. If I put some more fine tuning, okay, I can improve it and also have some more like expected results from that.

28
00:08:55,960 --> 00:09:05,320
[Interviewer]: Okay. On a scale from one to seven again. How satisfied are you with the results?

29
00:09:06,740 --> 00:09:24,420

[Participant]: I mean, yeah, this is really satisfying. I gave a script and I can imagine it and then in 10 minutes I can at least have some solid shots. Yeah. So I feel it's really helpful. Solid seven.

30
00:09:29,800 --> 00:09:37,780
[Interviewer]: So you would say it's cool that in a short time you can create something similar to your imagination?

31
00:09:38,240 --> 00:10:08,560
[Participant]: Yeah. I mean, if you've done the AI storyboarding, it's very difficult to actually get what it's in your mind. You have something imagined, but traditionally you do it on set, you shoot the stuff and you play around. So this is almost giving some kind of feel of that. So you can have some control on how you want and stuff, which I feel is really the most interesting factor.

32
00:10:08,820 --> 00:10:28,260
[Interviewer]: Okay. Yeah. Then just one last question is, Did you face any challenges? You already said a lot like about the fine tuning and the like tricky parts. Is there anything else that you find?

33
00:10:28,660 --> 00:11:11,440
[Participant]: I mean, I don't know. Maybe you can have some more character control also in the production. Yeah. I mean, I think I can have some more character control in the promts also. Rather than just relying on the mannequin. If I can describe the background and the character in relation to the scene, that could be also something which could be really cool, I think. Yeah. That's all. Okay. Good. Thank you. That was very interesting.

D1p1.2

1
00:00:03,500 --> 00:00:16,260
[Interviewer]: Alright, now the first question is about this last task. Just again, has anything changed like about the physical posing feature, how you like it or did it just stay the same?

2
00:00:17,820 --> 00:01:43,800
[Participant]: This time around I kind of liked it. Because this time you gave me a playground to play with and you know do stuff which is okay, I know within my grasp okay I can do this stuff. So now this time like I could make them walk together and those things I can fine tune and stuff.

And then I like this thing of you know okay deliberately making them close and small hands stuff which you can you know place. These kind of details you won't you know get to explain in a prompt. Okay my character is holding, putting his arms on his shoulder or they are close and they are. I feel okay now when I play around and see okay this is some small small things which I can add to increase the realness of the shot. I feel now it shows me like okay if you have a open playground and you see this is your shot creation playground then you have a lot of stuff to work with. Rather than going with the constrained thing and you know trying to get that.

3
00:01:44,480 --> 00:01:53,220
[Interviewer]: Yeah, so was it more that you had like the props or also that the question was just the task was very open or.

4
00:01:53,900 --> 00:02:05,820
[Participant]: I feel that the task was very open so that you can play around freely and get something more out of it.

5
00:02:08,400 --> 00:02:16,220
[Interviewer]: Okay then on a scale from one to seven again the physical posing feature in this task. how would you rate it?

6
00:02:16,280 --> 00:02:20,580
[Participant]: It improved. I would give it six this time

7
00:02:20,620 --> 00:02:28,100
[Interviewer]: Did you get any new insights in this task?

8
00:02:29,720 --> 00:04:02,100
[Participant]: Yeah. This is a really cool way to composite scenes. I think so that this way of playing around with physical thing and placing stuff opens up your mind. You can do a lot of stuff. And like the aspect of okay you can now then place them in actions and then use this camera to frame it like I could get a wide and thenI could ... you know it's very tough to sometimes in you're prompting to say okay I want a side view shot of. okay this side of the character is in this frame. Yeah. And you can't clearly explain that. Yeah. But this is okay. I can place it here or if I want a back shot of them from the behind I can do that. and that itself is a very very mind blowing thing I would say. Which is completely absent. I don't know if it's completely absent. They have some tools I think which they have some tools not for storyboarding for the video they have some x-field or some tools that have this camera control

thing but not in this way where you can physically do it. I think it's only within the interface where you can play around with the framing.

11
00:04:03,760 --> 00:04:16,860
[Interviewer]: That's what I was struggling with because I came up with the idea when I was trying to do like the pre-production process of a film and then I wanted to do the storyboard and I really struggled also to explain like.

12
00:04:16,899 --> 00:04:17,000
[Participant]: Um-hum.

13
00:04:17,480 --> 00:04:21,399
[Interviewer]: How the camera would be positioned and things so.

14
00:04:22,000 --> 00:04:47,060
[Participant]: I was also going through the same thing like. since last year I've started using these tools. in my mind I was always saying this is not it. this is not the way you would, you should use it. this is like this is never. there should be a medium in which you can play around with the camera angle and you have that feel of being in the cinematographer or the director of photography and you can frame everything.

15
00:04:47,180 --> 00:04:51,020
[Interviewer]: Yeah because also it's so much easier to just take the camera and do the shot.

16
00:04:51,080 --> 00:05:25,340
[Participant]: And do the shot. Yeah. It's just okay. if you work in film you know in script they would say okay wide shot or long shot. Yeah. It's never like that. you go on set and then you ymake changes on the go and that's how movies are made like. Yeah. You have an idea of the scene and then you go in the scene and then you place camera there and here and here and which needs to be there. Otherwise it's not filmmaking it's it's the spontaneity which is actually the real thing. That's the real part. Never you can describe. it in words. Prompting is it's a very big barrier. It's so cool I really.

17
00:05:25,520 --> 00:05:30,040
[Interviewer]: It's also you kind of notice it with the background because that's only a prompt and then it's like.

18
00:05:30,300 --> 00:06:31,280
[Participant]: Yeah it's it's doing half stuff. Yeah but background okay it's. it's think of it like the CGI. So it comes later. You can do what whatever with it with what you want. but the real thing which is the action and how the subject is there you can play around with that in real time. Background okay you can later create a environment and put the lighting and all these stuff you can add. but the real core is how the subject and stuff is there. Which is exactly the stuff that you get out of this. It makes me really happy. So I know someone also is also already did this stuff which I had in my mind and when I see this thing okay which I also had in mind and see you have very brilliantly thought out. and went out and did it. so it makes me really happy to see that also.

19
00:06:31,340 --> 00:06:46,500
[Interviewer]: That's so cool. Okay so on a scale from one to seven again how did you like the addition of the props?

20
00:06:46,720 --> 00:07:14,960
[Participant]: Uh I would have loved if uh you know the props would be kind of like a placeholder for any stuff which you want to keep in the background. Like if you had a prompt and you can label it and say okay this is a prompt object and you can place a car there or something. Okay. Or a specific stuff there.

21
00:07:15,720 --> 00:07:21,080
[Interviewer]: Okay yeah because right now it just takes it like the cups for example and does anything with it.

22
00:07:21,120 --> 00:07:26,480
[Participant]: Anything yeah. I think I placed the cups to symbolize the trees.

23
00:07:26,560 --> 00:07:27,000
[Interviewer]: Yeah.

24
00:07:27,700 --> 00:07:47,520
[Participant]: That's that's what I meant but it it. it also did a good way. it kind of took the trees from the prompt and the cups into some other thing which is also interesting. But it would be like the props thing is actually really cool. because uh yeah. If you can deliberately plan and use some props to put placeholders.

25
00:07:47,580 --> 00:07:54,580
[Interviewer]: Okay so there's the placeholder and then you can specify what it's supposed to be right?

26
00:07:56,080 --> 00:08:41,900
[Participant]: Do you know about virtual production? This almost it's like the the small scale version of virtual production. Where you know you have a big LED screen in the background. And and you have characters in there. And then uh you know uh you can place some props in the side and then you take a camera in the unity and then you can you know composite the stuff. And then the action is taken real time and then the background is added in postproduction. So this is kind of that same thing in a miniature scale for AI production. Which is cool.

29
00:08:42,559 --> 00:09:01,920
[Interviewer]: Yeah that's a good reference. Um yeah so how did the physical posing influence your creative process? You already said like a little bit about this that you uh found that you went along with like you did something and then you came up with new ideas or something.

30
00:09:01,960 --> 00:10:11,340
[Participant]: Yeah. I started with the parkour thing. I ditched that because it's not practical. I mean it might be practical but you have to be very creative and to think how it like. if you want a POV shot how would you imagine a POV shot to to be in this. Uh but later when you took these two characters and then okay I want a scene of them walking and talking and uh falling in love that kind of scene. You can organically like put them and play around and create some close scenarios and stuff which is uh. so I feel like okay you have an idea you can play around this with this and try out some things and then you know you get some ideas from this. So if you are really in the pre-production storyboarding and with someone and planning all this stuff. Everyone can give inputs and try out stuff which I think is really helpful.

31
00:10:13,600 --> 00:10:23,540
[Interviewer]: Um and how did the transition from physical posing to AI generation feel in your creative process?

32
00:10:25,460 --> 00:10:52,620
[Participant]: It felt really good apart from the gender roles. but it was also fine because it's uh. it got the composition it got the background got the facial stuff also. I mean at this stage the emotion is not there because um the emotion was not. But emotion is in the performance not in the storyboard.

35
00:10:53,660 --> 00:11:05,600
[Interviewer]: Okay. But uh would you have liked that in your storyboard that the emotions are there or is it like of importance to you?

36
00:11:07,620 --> 00:11:56,660
[Participant]: I mean in the overall uh sense of AI filmmaking. so if you generate an image and you are later gonna animate make it into video I think it would be always a good starting point to have in that image the emotion so that when you generate it it comes naturally. Uh. But I think in the storyboard phase it's fine you don't need that. but uh once you take this and then you use this as the reference and you go to actually make the images you can come make it in the prompt like all in that same. Butin this stage I don't think it's needed. Storyboarding is just for the you know just uh higher level overview of all the stuff. Yeah but that's fine.

37
00:11:56,720 --> 00:12:09,720
[Interviewer]: Okay um were there moments where the mannequin changed your original idea in this last task? So yeah you said like you wanted to do something different so it changed it there probably.

38
00:12:09,780 --> 00:12:34,960
[Participant]: Yeah I thought okay no I should not go for the weird poses I should go for something simpler some more human. but this would be very really most helpful right now in the simple simple actions and compositions and that kind of. not the over the top stuff but yeah simple stories with simple interactions and scenes. this would be the right option. Not the wild ones not not production not a good idea.

39
00:12:35,480 --> 00:12:42,340
[Interviewer]: Okay and how did the physical interaction influence your creative expression?

40
00:12:43,500 --> 00:13:07,220
[Participant]: A bit annoyed but mainly with the mannequin because it's a bit flimsy for me. uh yeah so that meant I have to make it carefully if you do it carefully. yeah but i think Did you get it from them or did you 3D print this?

41
00:13:07,600 --> 00:13:13,840
[Interviewer]: I got it from the internet. It's actually for uh artists who sketch so you can like pose them and then draw the.

42
00:13:14,400 --> 00:13:18,300
[Participant]: The body features and lines and. All the features okay.

43
00:13:18,640 --> 00:13:20,040
[Interviewer]: That's what it's actually for.

44
00:13:20,380 --> 00:13:21,640
[Participant]: It's not meant for you know.

45
00:13:22,780 --> 00:13:22,860
[Interviewer]: No.

46
00:13:24,380 --> 00:13:38,160
[Participant]: Playing around and you know adjusting all these legs and stuff that's me that's me. but if I think. I think for this overall idea maybe you can design or create make something specific which fits this purpose.

47
00:13:38,580 --> 00:13:40,860
[Interviewer]: Yeah that would be like the next step to do this thing.

48
00:13:40,920 --> 00:13:41,780
[Participant]: would be really cool.

49
00:13:42,100 --> 00:13:52,080
[Interviewer]: But that's also why I'm doing the study. so I get to hear like okay uh it's a little harder to work with. um yeah.

50
00:13:52,240 --> 00:13:58,360
[Participant]: I have a question I don't know. No I wanted to. Okay is it done? No ask a question.

51
00:13:58,640 --> 00:13:59,400
[Interviewer]: Just a couple more.

52
00:13:59,440 --> 00:13:59,900
[Participant]: No no no problem.

53
00:13:59,960 --> 00:14:06,880
[Interviewer]: Um on a scale from one to seven how much do you feel like the author of this storyboard?

54
00:14:10,280 --> 00:15:10,520
[Participant]: Now I feel it's my story like I'm kind of writing the story which I had the control not the other way around where you are you know the AI is taking control of you and you just saying okay I want a story in which my character is talking to this girl and then AI starts and says okay use some cloud or something to say okay now you can do this in this scene this scene this scene and it gives you some basic prompts to start with and then you give that prompts and then you get the images and then you work on that. so you got your ideas already biased based on what they have started to give not the other way around. where this this way I feel. okay I decided this stuff and then it's my own only vision which is coming to the to the storyboard. so in that way I feel it's giving much more uh ownership and uh you know confidence that okay this is my story which I'm telling.

55
00:15:10,620 --> 00:15:17,760
[Interviewer]: Yeah that's great. Um on a scale from one to seven?

56
00:15:19,120 --> 00:15:19,380
[Participant]: Seven.

57
00:15:20,340 --> 00:15:28,420
[Interviewer]: Okay. Um how did the interaction with the mannequin influence this feeling?

58
00:15:33,740 --> 00:16:33,440
[Participant]: I mean, when I started to bring them close and see, okay, I can make them closer and put these, this stuff, I felt more, oh, this is more like directing, you can play around and that, at that point I felt more excited, okay, yeah. And the camera is also a very big factor, like that also gives you a very big sense of filmmaking and control. Having a camera that's also like the most, I think this camera in the scene and this stuff is the most exciting. Physically having a camera and then you know, I can frame it and then maybe do a top down, that's the most exciting part. And you know, I think that's the most exciting part. Yeah. You did a comfy UI pipeline, like which model is this? Which model did you use for, or a pre-treat model or?

59
00:16:33,820 --> 00:16:35,760
[Interviewer]: It's a stable diffusion turbo.

60
00:16:35,820 --> 00:16:42,500
[Participant]: A stable turbo, okay. Wow, that's cool. And you made a full workflow for this?

61
00:16:43,160 --> 00:17:03,060
[Interviewer]: Yeah, it's actually, I started the project because I wanted like consistent characters, which is like hard to get. So that's how it started. So I have like IP adapter for the characters, which is now why you have two guys there.

62
00:17:03,580 --> 00:17:07,119
[Participant]: Because the same character is coming, coming up. Okay, yeah, now I get it.

63
00:17:08,000 --> 00:17:08,720
[Interviewer]: Yeah, but.

64
00:17:10,400 --> 00:17:32,760
[Participant]: So the workflow is just simple, right? But how is the, so this is kind of coming like the reference, the reference for the composition, this one. Yeah. And then it. All the art style is in this, this, you've trained it in this sketching kind of a style.

65
00:17:33,220 --> 00:17:56,520
[Interviewer]: Yeah, I kind of use like a trick where, because the characters are in this art style, it uses that as an, in the IP adapter as well. So I, I started with using like a model, a Laura for the style, but it didn't need it necessarily because of the style I use for the characters. And then I, in the background, there's a model. Yeah.

66
00:17:56,560 --> 00:18:08,880
[Participant]: And then there's a prompt as well. That's. That's managing this. Yeah. That's cool. And I'm just learning computer, but I haven't learned like, I don't know what to do with it, but this looks like a cool idea to like.

67
00:18:09,120 --> 00:18:12,700

[Interviewer]: Yeah, I actually never used. it before, before doing this project. So.

68
00:18:12,840 --> 00:18:20,900
[Participant]: Yeah. I mean, if you have something to work on, any project, then it's like the best place to learn that. Yeah, definitely.

69
00:18:21,640 --> 00:18:32,320
[Interviewer]: You just have to go with the flow and say, okay, this is what I want to do. Yeah. Yeah. Okay. Just couple more questions.

70
00:18:32,360 --> 00:18:36,440
[Participant]: Sorry, I'm making it long. I'm asking like, you know, a lot of questions.

71
00:18:37,160 --> 00:18:42,060
[Interviewer]: No, don't worry. I have time. I just don't want to like push it too far.

72
00:18:42,100 --> 00:18:43,360
[Participant]: I just have a class from 12 to 15.

73
00:18:43,520 --> 00:18:55,640
[Interviewer]: Okay. We'll get there. Um, yeah. So how would you rate the interaction compared to the traditional storyboarding process like drawing by hand?
74
00:18:55,700 --> 00:20:13,820
[Participant]: I would says so traditionally you have a script writer and director they would write script and then they would find a storyboarding artist and then he would try to imagine his own way how these stuff would be and he would make a sketch of this stuff. so it's mostly the script and the director's vision is mostly in the hands of the the storyboard artist who then imagines it in his own way. i don't know. but sometimes the directors are in process with the storyboard artist. but this is kind of more i would say giving the control to the director and the scriptwriter. they can. this gives a very big platform in which they can create the storyboard even if they don't know know the uh the style like uh drawing or something. yeah but the cinematographer and the director could could really be useful in this. they want to really figure out the full how the movie would be. that this gives an option for that.

75
00:20:13,880 --> 00:20:20,760
[Interviewer]: yeah definitely um but it like uh have you drawn a storyboard before?

76
00:20:20,920 --> 00:20:52,140
[Participant]: i'm not a very good drawer. i can see from this. but i try to like when i make movies like i i usually i do this kind of rough storyboard in my mind. uh to for myself to like explain it. uh yeah so i do draw a storyboard but not in the good way. but yeah in the necessary way like what would i use it to convey my stuff?

79
00:20:52,680 --> 00:20:56,640
[Interviewer]: okay and compared to that how did you like this process?

80
00:20:57,840 --> 00:21:41,240
[Participant]: this is my process.i would say next time almost like if i'm going to make a movie i would ask you to rent out this thing so that you know i can. if i have the idea i would just come here. yeah okay i would think okay if it's possible to do with this one because something's it's it's not possible. but if it's possible i would ask you okay i can't rent it out. i would just take all the shots and do some storyboarding with this and i would come with the the art style. so if if if i have the art style in mind then then if i bring the characters and stuff i can just come in in a day plan out all the shots and then get the storyboard.

81
00:21:41,940 --> 00:22:07,160
[Interviewer]: yeah yeah because also um i'll just talk a little bit more. um like originally um i had an interface where you could add your own characters. um i cut that out for the study because that would have been like too much. but actually there is a function where you can add your own characters and um then with that also you do the art style as well. so um it's not that far from possible.

82
00:22:07,760 --> 00:22:19,240
[Participant]: okay then i would be using this once you're done with the study and stuff.

83
00:22:20,000 --> 00:22:31,480
[Interviewer]: yeah um okay then we already talked about this. um how would you rate the interaction compared to an ai only storyboarding process?

84
00:22:32,380 --> 00:22:40,640
[Participant]: so i think i involuntarily told you about that stuff because it was already what i was also.

85
00:22:40,940 --> 00:22:48,400
[Interviewer]: yeah i think i know your answer. um do you have any suggestions ideas? for the system.

86
00:22:50,860 --> 00:25:23,360
[Participant]: uh i mean i see a lot of potential of stuff. did you think about? okay um i understand going with the camera like so you are really playing with the hands. uh. but is it uh a possibility in which you know uh i was thinking of in this way where okay you are in a studio or in a set and you create a uh environment or a set or a 3d set in which you are working in or environment and then on top of that you you you have that in the in the in the tool in the just like how you see in unity or in this kind of. i think now with the images and stuff you can make a mapping of a 3d environment or something like that. i don't know if that's possible but you have that interface in which that 3d world and then uh where you know where all this subject thing is and then after that you give give it take this camera and then you can kind of play around in the the real like this stuff

[Interviewer]: but like a virtual reality where the environment is already like projected into this.

[Participant]: no no that's in this in the interface inside the inside the system it's like you can have a 3D environment studio or a set and then so you can. i mean this is completely a different process. this is not storyboarding it just like you are compositing uh 3d scenes. yeah it looks like that but but i i thought that this could be a process. uh this is like. this works perfectly in storyboarding. but when you come to actually generating the shots like from the images and this stuff i feel the current process of generating image and then video is kind of a very not so fluent process. yeah so if you can break down into how studios really do film like you make a set then you bring in the actors and then you compose it. so yeah you may imagine a set with some ai tools and then you know I was thinking this is just a possibility.

87
00:25:24,080 --> 00:25:25,340
[Interviewer]: like for the background.

88
00:25:25,380 --> 00:25:36,740
[Participant]: yeah the background and then you have the flexibility to take the shots. some wild idea i'm not entirely clear on that.

89
00:25:38,660 --> 00:25:50,320
[Interviewer]: it's interesting yeah and makes a lot of sense also. um yeah. so the last question is just do you have any other remarks thoughts you wanna

90
00:25:51,980 --> 00:26:27,540
[Participant]: can i work with you? i would be really interested to you work with. okay i'm also into film ai filmmaking and actively i'm also doing that. so to see. okay you are someone also who is interested in this stuff so it would be cool to learn from you and you know working some projects.

91
00:26:27,640 --> 00:26:47,820
[Interviewer]: yeah that's all the questions. just one last questionnaire for you.
