D2p3

1
00:00:05,660 --> 00:00:08,380
[Interviewer]: Okay, so how did you proceed with the first task?

2
00:00:09,860 --> 00:00:12,580
[Participant]: The first task? What do you mean with? how do I proceed?

3
00:00:13,580 --> 00:00:19,300
[Interviewer]: Not the introduction, the first task. You remember? The one where you got the...

4
00:00:19,600 --> 00:00:24,620
[Participant]: Yeah, but like the question is how did I... Like how do I succeed it?

5
00:00:24,780 --> 00:00:28,680
[Interviewer]: No, no, how did you approach it? What were your steps?

6
00:00:29,220 --> 00:02:33,160
[Participant]: Okay, so the first task was to... It was the scene with running, right? And then like... So there were like two different frames and each had a different shot. I think the first one was a full shot. So my first thought was, okay, how can I make this figure into like dynamic running pose. Because I felt like that was really important, is to that... The way the figure looks is the key element to it working. That was my thought. So I tried to make it as dynamic as possible. Then I took a picture and I thought, okay, I sort of get the vision of what the script is trying to do, but how can I communicate it to the machine? I found it a bit hard because it was like, okay, I felt like giving too much information would also make the results worse. So I try to give little information, but very clear information of what the AI should do. But it was still difficult because I felt like, okay, the AI can't read my mind, doesn't really know what to do, and also doesn't probably have all the reference pictures in the world to create such an image. I felt like with the first one I was rather content, and this one. I think what I liked about it, okay, this is maybe not the question.

7
00:02:34,440 --> 00:02:35,160
[Interviewer]: What did you want to say?

8
00:02:35,720 --> 00:04:20,779

[Participant]: What I liked about it was that it did have the dynamic that I had in mind, like the dynamic pose for the character, it sort of translated it. I felt like the background, not quite, but with the second one I found it way harder because showing a dynamic running pose, I felt like it's easier than showing someone stretching their hand. And I knew that I couldn't describe it, what was happening. So I was. just focusing mainly on the background. So I started saying like, yeah, like, you see the street and the buildings in the background, and I was trying to play a lot with like a sunset and sun reflections. The light things didn't work out as much as I wanted to. I felt like most of the time when I tried to include a sun, it just completely ignored me. So I did say, yeah, street lanterns just to have something, and it did generate something, but it didn't look like buildings or street. I felt like maybe being concrete in the first frame about New York City also helped the AI a bit. Like to say certain city names or skyline buildings probably, but like pedestrian street, I felt like the AI doesn't really know the difference between a normal street and a pedestrian street. But it has something like, ah, New York City. Skyline something, something.

9
00:04:21,959 --> 00:04:24,020
[Interviewer]: Okay. So like vaguely.

10
00:04:24,780 --> 00:04:25,040
[Participant]: Yeah.

11
00:04:27,820 --> 00:04:30,500
[Interviewer]: Okay. How did you proceed with the second task?

12
00:04:30,980 --> 00:07:35,900
[Participant]: The second task, I was just thinking again about movement and. how can I show movement with camera shots in the storyboard. And the first frame was about jumping. So like, I thought about doing three to four frames, one showing kind of the jump, then showing the person pulling, like Dave pulling his knees and then showing a sort of backflip. So this was like the three frames I had in mind. So for the first one, I think this went quite well. It was, again, a very dynamic pose, which was easy to understand for the AI. I did try a lot of things out, until being like again, ah, okay, Manhattan in the distance, the concrete city name helped. A sunset didn't do anything at all. Tall skyscrapers helped. Birds made the scene look better. And also saying very high in the sky, the AI sort of understood that. That was good. Second frame, way harder, mostly because of the figure not being able to pull their knees which means that if the figure cant pull their knees how am i supposed to show the AI? So it ended up looking like the character is just sitting on the floor. because i also decided to my first shot that i did was from below but then the you couldn't see the face. so i need to do it again from above. but now it looked like the character is sitting and i had like multiple tries until the ai sort of understood that i wanted to see a street but the street was way bigger than i expected. then i said bird's eye

perspectives cars and streets crossings and street lights all from above. but yeah these sort of bird perspective shots the AI doesnt seem to do quite well. third one i was a bit more positively surprised. i did make like a pose where you can clearly see their face um but only like the second try. and i just said skyscraper in the background new york and it somehow sort of understood the vision which is interesting like the um my sort of assumption that less information can bring better results. is kind of true. that's what i feel like. The more generic it is and the less specific it is. i guess the more like the easier the AI has it to generate something.

15
00:07:40,080 --> 00:07:53,640
[Interviewer]: okay um so on a scale from one to seven how did you like the physical posing feature with one being the most negative and seven positive?

16
00:07:53,980 --> 00:08:27,060
[Participant]: do you mean like with the figure? yeah i mean the thing is i really liked the idea of it. it's like i would say it's a five out of seven and the two points are just really because the figure just kept breaking apart. i would definitely i like using figurines to imagine poses. i think it's something i would even consider using when doing storyboards myself even if i would draw them. it's something i haven't considered before but it's very nice

17
00:08:28,380 --> 00:08:44,880
[Interviewer]: okay cool um were there moments where the mannequin changed your original idea like for example? you already said yeah i did.

18
00:08:45,500 --> 00:09:08,840
[Participant]: in the second frame it definitely did. i felt like with the with the backflip also i tried to make it look like it like Dave made a backflip but whatever i did. it. just there was a lack of balance i would say. so the pose that i did was kind of the best that i could. that would still keep the balance.

19
00:09:09,580 --> 00:09:12,720
[Interviewer]: so it was because of the restrictions of this puppet.

20
00:09:13,020 --> 00:09:21,440
[Participant]: yeah the restriction of the puppet made it um hard to do what i envisioned.

21
00:09:21,800 --> 00:09:33,540

[Interviewer]: okay um on a scale from one to seven how much did you feel in control of the results?

22
00:09:35,240 --> 00:09:38,140
[Participant]: i would say more like a two out of seven.

23
00:09:41,460 --> 00:09:46,400
[Interviewer]: You already said with the lighting for example. Was there anything else?

24
00:09:46,880 --> 00:10:35,340
[Participant]: Ah you mean… I thought was it related to the AI or?

[Intereviewer]: No eh everything lie of how much did you feel like in control?

[Participat]: Uh then I would say like a 3 out of 7. I think I had more…I think I was like in control over the poses as long as you could see the face in most cases there were some exceptions with the backgrounds it was sometimes better than I expected but it was also very random. okay. so I felt very limited in what I could do with the background.

25
00:10:35,540 --> 00:10:52,580
[Interviewer]: And how did the interaction with the mannequin influence this feeling of control?

26
00:10:57,720 --> 00:11:40,680
[Participant]: I think the mannequin itself did give me feeling of more control because I feel without it I find it's hard to imagine certain poses and that way I felt ah like okay I'm not restricted to what kind of poses I could draw or imagine or something because I can see it in front of me and how the anatomy works. it's more like the mannequin itself had restrictive movement which then was the restrictive factor.

27
00:11:49,780 --> 00:12:08,420
[Interviewer]: so you felt that this helped with the restrictions you would have had but had its own restrictions. And on a scale from 1 to 7. how satisfied are you with the results?

28
00:12:09,880 --> 00:12:12,800
[Participant]: yeah I would say it's like a 3 out of 7.

29

00:12:12,900 --> 00:12:20,620
[Interviewer]: you already said a little bit but why?.

30
00:12:20,660 --> 00:13:18,380
[Participant]: I feel like maybe it's even oh my gosh I'm sorry if I like go back and forth. maybe it's even a 2 out of 7 because I felt like the idea of the storyboard just doesn't get communicated well because I feel like the backflip like you can see the jumping I think the first frame is okay but I'm not very content with the other two frames the second frame he looks like he's sitting on the floor and in the third frame you see that he's in the sky at least which is nice. he also looks like he's falling which I guess he is. it's not really…

31
00:13:19,400 --> 00:13:28,320
[Interviewer]: you mean like that what it says in the script and then what the idea you have for this doesn't get communicated.

32
00:13:29,060 --> 00:14:03,140
[Participant]: yeah I feel like. yeah I feel like the idea in the script doesn't get communicated and also my idea of what is happening also doesn't get very well communicated but because of the first frame I give it like a 2 out of 7. I think if I would do it again I would choose probably simpler camera shots. I think I tried to get very dynamic shots but getting dynamic shots also causes the eye to have problems.

33
00:14:06,000 --> 00:14:20,040
[Interviewer]: so you would say you said that the idea doesn't communicate well what you thought of and so would you say it's. because of the AI or the mannequin or both

34
00:14:20,080 --> 00:14:46,540
[Participant]: Both. because the the angles that I can do or not do like the shots and from where I feel like it's very dependent on the AI. Like the sort of move, like the poses, this is where the mannequin may be a restriction.

35
00:14:47,400 --> 00:14:52,600
[Interviewer]: Okay, so the mannequin for the pose and the AI for the perspective.

36
00:14:52,660 --> 00:14:54,640
[Participant]: For the perspective and stuff, yeah.

37
00:14:55,460 --> 00:14:58,000
[Interviewer]: Like you said with the bird's eye for example.

38
00:14:58,460 --> 00:14:58,740
[Participant]: Yeah.

39
00:14:59,580 --> 00:15:08,720
[Interviewer]: Okay. Cool, that's the first interview. Thank you.

D2p3.2

1
00:00:00,620 --> 00:00:23,600
[Interviewer]: Okay, then... How did the transition from physical posing to AI generation feel in your creative process?

2
00:00:26,780 --> 00:01:24,040
[Participant]: I think it felt like always asking yourself, is this gonna work? Is this going too far? I think it did influence me in thinking not just about, okay, what could be a cool pose, but more about how can I make a pose that has a good silhouette. Silhouette for the AI to recognize and understand. I think in the first frame, for example, I was thinking how would a landing pose look like? Sort of get this idea across. I felt like the AI sort of understood that. Or at least it looks a bit like a person that is actually landing, which is satisfying to see. Mm-hmm.

3
00:01:24,080 --> 00:01:24,380
[Interviewer]: Mm-hmm.

4
00:01:24,480 --> 00:01:38,080
[Participant]: And, for example, the second frame where I had two characters, I knew that I had to sort of hide one of the faces because to make it, you know, to not have two, what is she called?

5
00:01:38,780 --> 00:01:39,360
[Interviewer]: Sarah.

6
00:01:39,480 --> 00:01:45,580

[Participant]: Sarah's there, which ended up still being two Sarahs, just one mutated one.

7
00:01:48,980 --> 00:01:56,840
[Interviewer]: Okay. So it was kind of the limitations of the AI that influenced.

8
00:01:58,360 --> 00:02:09,860
[Participant]: Yeah, I think that is actually true. I think the AI kind of limits you in what you can do, so it also is a limiting factor.

9
00:02:10,300 --> 00:02:17,260
[Interviewer]: Okay, were there moments where the mannequin changed your original idea in this last task?

10
00:02:24,500 --> 00:02:52,600
[Participant]: I don't really think so. Actually, it did change it a bit because I felt like it was because the face, but also maybe it's just the AI thing mostly, no, I think it didn't because I just tried to have the face on camera all the time. But no, I don't the mannequins this time did influence a lot of what's happening.

11
00:02:54,560 --> 00:03:13,840
[Interviewer]: It doesn't have to mean like negatively, it's also like did this interaction with the AI, the mannequin change your original idea? or did you always have an idea and then just do it with the mannequin and also with the shot? maybe, I don't know.

12
00:03:14,160 --> 00:04:20,680
[Participant]: I mean, it did change a bit of my idea of how I wanted the last sort of jumping shot to be. I think I already, the way I was already doing it because of the limited time was already to think what would be fun to do with the mannequins and with the AI, what sort of props I want to use. So I felt like the story doesn't even make that much sense in my case and was more about, okay, I want to add another person. So what if you have an over the shoulder shot where you see the other person, but two characters shouldn't be in the same scene. Yeah, this is actually what happened. I would have liked to see two characters in the same scene. Now, this was very limiting to not have that. I wanted to have Dave and Sarah.

13
00:04:22,340 --> 00:04:27,040
[Interviewer]: Yeah, that makes sense. And you already knew there would be two.

14
00:04:28,320 --> 00:04:32,360
[Participant]: Yeah. So their interaction felt a bit disconnected.

15
00:04:34,820 --> 00:04:38,720
[Interviewer]: How did the physical interaction influence your creative expression?

16
00:04:41,300 --> 00:05:01,480
[Participant]: I think I wouldn't have added a prop or like, something in that regard if it wouldn't have been for the props. You know, I wouldn't have said, oh, so Sarah is giving Dave a gift for, I don't know, doing a backflip. It doesn't really make a lot of sense, but I thought it's fun. to use a prop.

17
00:05:02,660 --> 00:05:09,840
[Interviewer]: So the props was like for the study, you did it because of the study, because you wanted to try it out or?

18
00:05:10,000 --> 00:05:54,980
[Participant]: Yeah, I think a bit of it was to try it out to see what was possible. I think, I feel like under time pressure, it was hard for me to imagine the story, of like how it would go on. Because I also had this whole like excitement about, oh, I could use this prop, I could do this now. So, yeah.

19
00:05:56,420 --> 00:06:06,480
[Interviewer]: Just a couple more questions. On a scale from one to seven, one being the most negative again. How much do you feel like the author of the storyboard?

20
00:06:18,080 --> 00:06:19,640
[Participant]: it's like a three out of seven.

21
00:06:24,740 --> 00:06:25,020
[Interviewer]: why?

22
00:06:26,820 --> 00:07:25,520
[Participant]: um it's like it's. there's lots of like. the constraints are probably. i mean i cant choose who's like like how uh dave is expressing himself or something. i mean there's just

certain details that i felt like is missing. um i don't know. maybe if there would be less limitations i wouldn't be so i wouldn't like. it wouldn't feel so much out of my control. um i think what like sort of creates this feeling. i think what like sort of creates this feeling is thinking hmm maybe i could do this and then something doesn't work out and you're like ah okay i have to play by the rules of the AI or the mannequin and not by the rules of my imagination.

23
00:07:40,700 --> 00:07:51,120
[Interviewer]: and uh did the interaction with the mannequin influence this rating and this feeling of being the author?
24
00:07:52,160 --> 00:07:54,760
[Participant]: yes, because it broke all the time when i tried to do something.

25
00:07:55,440 --> 00:07:56,740
[Interviewer]: so the limitations of the?

26
00:07:57,020 --> 00:08:04,320
[Participant]: yeah it's it's like yeah if the mannequin would not be as limiting i would feel more in control.

27
00:08:05,340 --> 00:08:12,700
[Interviewer]: okay um how would you rate this interaction compared to the traditional storyboarding process?

28
00:08:15,260 --> 00:08:51,400
[Participant]: i would say it's probably a bit quicker. i would say um the limitations come from the technology and from the kind of from the ai and the mannequins you use and not from the skill of drawing that you have. so i feel like these are two different things.

29
00:09:02,500 --> 00:09:29,160
[Interviewer]: um but um does this um would you seriously um do you feel like this um could somehow be be like combined with your process or something like the traditional storyboarding process?

30
00:09:29,240 --> 00:10:18,660
[Participant]: Actually okay like it depends on what from that I feel like this whole approach with working in a 3D space with mannequins and with the camera is really cool. It's something I

haven't thought about and I would even consider like making photos of mannequins and using it in my process. I must admit I felt like the AI didn't add too much to it because it was... The AI always did something but with the background. But not necessarily what I imagined.

31
00:10:18,780 --> 00:10:40,880
[Interviewer]: How would you rate this interaction compared to an AI only storyboarding process?

32
00:10:44,040 --> 00:12:30,040
[Participant]: I like it way more. I feel there is more control. I feel like... What I liked about it is that especially when using the prompts and for example I used this whiteboard. It's like you could in theory put in the work to just set up everything. So the only thing that the AI does is just transporting it like transforming it into a sort of storyboard style. Which I feel like just like if we take all the like ethical concerns of AI out of the way. I feel like that's a cool technology. I feel like sort of this idea of a technology that can transform like props and characters into an AI storyboard. I think that's cool. Like I don't think it takes too much away. Like of course it's better to be able to draw it just yourself. But of course not everyone is that skilled. And I think... Yeah. I don't know. I feel like it has potential given that. But yeah it's more like... But this is more other topics involved with that, like how ethical is the AI that you're using that is generating the pictures. But if it is an ethical AI, I think that's a nice idea.

33
00:12:32,880 --> 00:13:02,420
[Interviewer]: Okay. So you would say it's better than the AI on The Storyboarding process?

[Participant]: Yes.

[Interviewer]: only two last questions. do you have any suggestions ideas for the system you already mentioned a bit like uh to have the props and the surrounding and the ai only kind of transforming it into the storyboard.

34
00:13:02,460 --> 00:13:58,800
[Participant]: yeah i mean i just ask myself like would it be possible to have sort of um i don't know object recognition or something like? could you just put numbers on objects or characters and then be like tell a machine learning system of hey uh this is this object can you um i know you see this. uh you see this cube. can you transform it into a gift you know or something along these lines? i think would be interesting like sort of motion capture-ish you know like you have things that the camera catches and then just that it generates something?

35
00:13:59,480 --> 00:14:11,860

[Interviewer]:yeah i think i agree definitely. um do you have any other remarks? anything else?

36
00:14:13,520 --> 00:14:22,400
[Participant]: i thought it was a very nice study. it was very fun. i put a smiley yes a smiley face where the website was nicely designed.

37
00:14:22,740 --> 00:14:23,160
[Interviewer]: thank you.

38
00:14:24,500 --> 00:15:14,660
[Participant]: um i felt like it was very user friendly. um it's sort of cool generally just to have a sort of program like this where you just connect your camera take photos and create a storyboard. with it. it was something unique that i haven't encountered before. um yeah and i would like to see in the future sort of um something similar maybe with a trained like. if you train it yourself like a machine learning algorithm where you have like training it to recognize like i like to know certain objects yeah and maybe have it like oh yeah make this um cube into a gift or something and then yeah

39
00:15:14,780 --> 00:15:15,900
[Interviewer]: that would be really cool

40
00:15:16,800 --> 00:15:26,500
[Participant]: to sort of have. yeah like maybe you can even train it yourself taking lots of photos of certain objects and then making the AI.

41
00:15:26,660 --> 00:15:28,960
[Interviewer]: yeah it should be possible.

42
00:15:29,460 --> 00:15:38,480
[Participant]: yeah i think so. yeah yeah to have it more specific but yeah this is
