D3p4

1
00:00:02,300 --> 00:00:06,000
[Interviewer]: Ich frage die Sachen auf Englisch. Du kannst gerne auf Deutsch antworten. Oder auf Englisch, was dir lieber ist.

2
00:00:06,580 --> 00:00:08,640
[Participant]: Okay.

3
00:00:11,240 --> 00:00:13,080
[Interviewer]: How did you proceed with the first task?

4
00:00:13,120 --> 00:00:16,860
[Participant]: What do you mean?

5
00:00:17,660 --> 00:00:19,940
[Interviewer]: Also, how did you proceed with the first task? Wie bist du vorgegangen?

6
00:00:19,980 --> 00:01:15,520
[Participant]: Ah, proceed. Well, I simply did what was on the paper. I struggled a little bit with the mannequin, because it was falling apart sometimes. I was also not very confident prompting, I guess. Because... I don't really use words very often to describe scenes. I'm a very visual person, so I mostly just draw what I have in my head and don't put it into words. So my prompts were very basic.

7
00:01:22,740 --> 00:01:24,700
[Interviewer]: How did you proceed in the second task?

8
00:01:28,580 --> 00:01:59,100
[Participant]: Well, I kind of did the same thing. Not much of a change there. I found that... I found the time a little bit short to really think up more frames. So I didn't do many. Um... Yeah, I found the first task a bit simpler, because I didn't have to imagine the scenario. Um... But yeah, otherwise...

9
00:02:00,380 --> 00:02:15,980

[Interviewer]: Did you think about the scenes you wanted to do beforehand, on the second? task? Did you think of every frame you wanted to do before, or did you just go with the flow and... While creating, came up with the next frame?

10
00:02:16,680 --> 00:02:22,020
[Participant]: Um... It was more the second thing.

11
00:02:25,960 --> 00:02:28,780
[Interviewer]: Okay. So you came up with the frames on the go?

12
00:02:30,180 --> 00:02:44,880
[Participant]: Yeah. The second frame was also just like... I was figuring that out as I was posing the mannequin, because it was really tough to get it to behave in that way. Um, yeah. Okay.

13
00:02:54,420 --> 00:03:02,140
[Interviewer]: Okay. On a scale from 1 to 7, 1 being the most negative and 7 positive, how did you like the physical posing feature?

14
00:03:02,180 --> 00:03:07,140
[Participant]: Uh... So like posing the mannequin in real life?

15
00:03:07,180 --> 00:03:09,700
[Interviewer]: Mhm. The posing and like taking the picture with the camera.

16
00:03:14,660 --> 00:03:26,060
[Participant]: Ah. Um... I think the posing was a bit tricky. But... Um... Taking the frame was pretty fun, so I think it's like somewhere in the middle, 3 or 4.

17
00:03:26,100 --> 00:03:47,120
[Interviewer]: And, um, were there moments where the mannequin changed your original idea? You already said a little bit that you had to adapt to what was possible.

18
00:03:47,360 --> 00:04:10,860
[Participant]: Yeah, yeah. When like, um, um... In the description, when the description said that he would pull his knees to his chest, that was just simply physically not possible with the

mannequin to do it exactly as it was there, so... Um... Yeah, I had to figure out a way to make it still look... Like he's doing that somehow.

19
00:04:11,480 --> 00:04:19,200
[Interviewer]: Mhm. Um... Makes sense, yeah. Um... On a scale from 1 to 7, how much did you feel in control of the result?

20
00:04:28,600 --> 00:04:35,380
[Participant]: Uh... When 7 is the highest? Um... I would say 2 or 3.
21
00:04:35,440 --> 00:04:39,420
[Interviewer]: Why?

22
00:04:41,440 --> 00:05:07,760
[Participant]: I feel like I didn't have much control of the backgrounds. Like the shot and everything is... It's... There's still a lot of stuff possible with like different camera angles that you can control, but um... I feel like the prompts didn't give me much control.

23
00:05:07,800 --> 00:05:15,800
[Interviewer]: Okay and how... You said like the background you couldn't control, the camera angles you could control and how did the mannequin influence this rating?

24
00:05:16,560 --> 00:05:25,780
[Participant]: Uh... Yeah, the mannequin was giving me a bit of a headache too so... Okay. It's probably also... Rather on the... On the... Pulling it down side.

25
00:05:32,040 --> 00:05:43,960
[Interviewer]: Mhm. Now on a scale from 1 to 7, how satisfied are you with the result?

26
00:05:44,380 --> 00:06:15,200
[Participant]: I think in scen one they turned out pretty alright. So there i would say like five but in the second scene i would say like a three

27
00:06:15,300 --> 00:06:23,360
[Interviewer]: Why?

28
00:06:23,400 --> 00:07:03,820
[Participant]: I think especially posing the manikin was more in the realm of possible with the first one because the backflip was just pretty tough to do, ehm, yeah

29
00:07:03,860 --> 00:07:07,800
[Interviewer]: Ehm okay, so you were unsatisfied with the posing of the manikin because of those limits

30
00:07:07,860 --> 00:08:11,860
[Participant]: Yeah an it simply didnt fit that well for the second scene where the manikin would have had to be more you would have to have more range of motion for that scene to work, i guess. Ehm and like the also that the task had like a description kind of made it easier. You had to just do it and not think about the frame. And especially in only that short amount of time im just not happy with the angles that i chose for the second one. Because there is a lot of experimentation i would have to or wanna do if it were a real project.

31
00:08:11,920 --> 00:08:19,440
[Interviewer]: Do you think the manikin is practical for you wanting to experiment

32
00:08:19,480 --> 00:08:29,840
[Participant]: Yes if the manikin was better then it could be useful

33
00:08:33,940 --> 00:08:40,559
[Interviewer]: Did you face any other challenges? Apart from the AI background and the manikin

34
00:08:42,780 --> 00:09:09,780
[Participant]: Ähm… the time limit. I dont think it was very… I dont think it was too bad like it was possible but if you want to experiment more then maybe 50-100% percent more time would be helpful. But i also get that its tuff with the studies so yeah

35
00:09:09,860 --> 00:09:16,860
[Interviewer]: Okay, das war's für das erste Interview.

D3p4.2

1
00:00:01,580 --> 00:00:08,660
[Interviewer]: On a scale from 1 to 7, how did you like the physical posing feature in this last task?

2
00:00:11,480 --> 00:00:22,720
[Participant]: This time it was okay-ish, I guess. It was like 5, I think. Because I specifically picked poses that would work.

3
00:00:36,160 --> 00:00:40,020
[Interviewer]: Did you get any new insights through this last task?
4
00:00:40,120 --> 00:01:47,000
[Participant]: I was mostly struggling with the limits of the background generation, because it would just not do what I would want. And it would also sometimes... I had one frame where there were bricks in the background and I used some props for that. And in some backgrounds, the props were included and influenced how the background was generated. But in others, it did not. And especially I could not mix those results. Which was a bummer because some frames I liked better in general, but they did not include the props. So it was a bit of... So I didn't have the ability to mix and match between those.

5
00:01:47,040 --> 00:02:02,820
[Interviewer]: On a scale from 1 to 7, how did you like the addition of the props?

6
00:02:04,040 --> 00:02:07,840
[Participant]: I think they were pretty cool, yeah. So like a 6.

7
00:02:08,300 --> 00:02:11,820
[Interviewer]: What did you like about it?

8
00:02:12,020 --> 00:02:28,800
[Participant]: That you could influence the background beyond the prompt. Even if it did not matter sometimes. But yeah. That makes sense.
9
00:02:28,840 --> 00:02:41,600

[Interviewer]: How did the physical posing influence your creative process?
10
00:02:41,800 --> 00:02:56,840
[Participant]: Yeah. I think this time I was just picking the frames in a way that would work with the mannequin.

11
00:02:58,600 --> 00:03:01,240
[Interviewer]: So picking frames beforehand that would work?

12
00:03:02,280 --> 00:03:02,500
[Participant]: Yeah.

13
00:03:11,940 --> 00:03:17,420
[Interviewer]: How did the transition from physical posing to AI generation feel in your creative process?

14
00:03:22,860 --> 00:03:49,740
[Participant]: This time I did it a bit different. than the other times where I before I was just like doing the frames sequentially so I was just like finishing one and then going to the next but this time I just did the posing first and then tried to make the backgrounds for all the frames and I liked that better because I could focus on the specific aspects more.

15
00:03:50,600 --> 00:04:03,060
[Interviewer]: Why did you change the way you proceeded?

16
00:04:07,500 --> 00:05:06,380
[Participant]: Mostly or like one of the reasons is definitely that the generation takes a bit. so I think it was just like a thing of focus. Because when I was... I could focus on picking out the frames and I did not have to jump back and forth and I liked that better and I just had to figure that out, I guess, through the experiment.

17
00:05:09,520 --> 00:05:15,720
[Interviewer]: Okay so it was easier for you to say okay I'm with the mannequin now and doing the different shots first?

18
00:05:15,980 --> 00:05:22,400

[Participant]: Yeah and then figure out the backgrounds.

19
00:05:24,380 --> 00:05:32,240
[Interviewer]: um were there moments where the mannequin changed your original idea in this last task? you already said like beforehand on how you…

20
00:05:32,940 --> 00:05:49,640
[Participant]: So yeah like it didn't influence like on the first tasks it influenced what I could. it influenced the result but because I couldn't do what I wanted. but this time I just changed what I wanted based on what the mannequin allowed.

21
00:06:01,900 --> 00:06:06,920
[Interviewer]: and how did the physical interaction influence your creative expression?

22
00:06:12,840 --> 00:06:20,620
[Participant]: I find that one hard to answer.

23
00:06:21,920 --> 00:06:49,680
[Interviewer]: it is a hard question. you already said that the limitations obviously kind of restricted your expression. was there any other restrictions or maybe something that enhanced the way you expressed your creativity?

24
00:06:57,120 --> 00:07:49,140
[Participant]: I think the props added some stuff in that regard because I could like think about. I was what I wasn't wanted to like. I wanted to finish this or yeah complete this whole sequence of scenes by just like he does this backflip and afterwards he crashes into a wall. that was the idea. and then I could look what one of the props could match that and what I could include and then play around with it a bit. and yeah. so I think I'd also just like came up with the frames a little bit on the spot because when I was posing them I could figure it out in the in the moment how I wanted to look the how I wanted the scene to look exactly.

25
00:07:56,340 --> 00:08:01,320
[Interviewer]: Okay can you repeat the last sentence? so you came up with the idea spontaneously?

26
00:08:01,780 --> 00:08:01,960

[Participant]: Yeah.

27
00:08:03,080 --> 00:08:04,440
[Interviewer]: Because you could see what..

28
00:08:05,300 --> 00:08:21,700
[Participant]: Yeah I did not. I did not like make a 100% accurate plan from the start because like seeing things in real life just changes things.

29
00:08:23,740 --> 00:08:30,180
[Interviewer]: Okay just a couple more. um on a scale from one to seven how much do you feel like the author of the storyboard?

32
00:08:39,340 --> 00:09:30,960
[Participant]: I would say like a 4. I did change like I was in control of a lot of things like doing the posing and the camera angle. um the backgrounds are a bit tricky because I could not get exactly what I was looking for. um I could just like pick the one that was matching the most. um so that was what I kind of could not influence that much.

33
00:09:33,420 --> 00:09:41,580
[Interviewer]: Okay so um the interaction with the mannequin did influence this rating of how much you felt like an author?

34
00:09:43,800 --> 00:09:46,820
[Participant]: I would say it was neutral this time.

35
00:09:47,380 --> 00:10:04,180
[Interviewer]: Okay so um did it make… did it like change the way how much you felt like an author? you already said the because you felt in control of the posing that was something that made you feel more like the author?

36
00:10:06,580 --> 00:10:06,960
[Participant]: Yeah.

37
00:10:07,320 --> 00:10:17,080

[Interviewer]: And the angle of the person. Okay. Um how would you rate this interaction compared to traditional storyboarding process?

38
00:10:18,260 --> 00:10:56,700
[Participant]: Um I'm a little bit conflicted. like on the one hand I really like drawing and drawing storyboards. um I can definitely see that this is pretty quick to do, but the results are also middelin so I would say like if speed is the only metric then this could work. but personally I would always do the storyboard by hand.

39
00:11:02,560 --> 00:11:13,600
[Interviewer]: Um and how would you rate the interaction compared to an AI- only storyboarding process?

40
00:11:19,760 --> 00:12:02,080
[Participant]: Yeah I think this one is kind of middle of the road compared to doing it fully with AI because then you would have to also do all the character posing and everything the angle via the prompt. and with this kind of approach I can at least do some things physically and not rely on prompting only. so I like this one better than doing it fully with AI.

41
00:12:02,120 --> 00:12:35,680
[Interviewer]: Okay just two more. Do you have any suggestions or ideas for the system? It includes like the entire interaction also with the puppet but also the interface.

42
00:12:35,720 --> 00:13:40,600
[Participant]: I don't know if they exist like. I don't know if easier to use mannequins exist that have like more range of motion. That would be cool. I think the program was pretty intuitive to use although I would have preferred it to use the camera button to take the photo because then you can just… like doing it like this I had to like have one hand on the keyboard and hold the camera with the other. it was a bit janky but it's probably like a software limitation. so I totally get that. but like the interface itself was pretty self-explanatory and easy to use.

43
00:13:43,000 --> 00:13:56,640
[Interviewer]: so if the mannequin was digitally because then you could like do it as you wanted to would that be better or worse? because it comes with like pros and cons?

44
00:13:56,740 --> 00:14:43,520

[Participant]: yeah I think it's hard to say like. I think a physical mannequin that was just you better would still be better than doing it digitally because like dragging around digital mannequins is really tough. I've done that a bunch of times and it just stinks kind of. and yeah the mannequin was just like. I think there are probably better mannequins out there. that don't instantly fall apart and um that where you can actually move the elbows and stuff like yeah. it's not impossible I think.

45
00:14:45,180 --> 00:14:55,800
[Interviewer]: okay then just do you have any other remarks?
46
00:14:56,620 --> 00:15:39,140
[Participant]: No.
